Bold, creative, and often shades of blue are how I would describe my personality, which is reflected perfectly in my personal branding design. The choice to connect my unique name directly to my brand signifies my personal connection to all the designs I create. Demonstrated in the shades of blue and animated illustration of myself, this identity design is authentic and unique because we all should be.
Tangerine salon, located in Dallas, Texas, specializes in women's hair products, cuts, and spa treatments. This salon caters to women desiring a pampered experience at a reasonable price. The tangerine salon also sells refillable hair product bottles to help reduce waste and keep their customer’s hair nourished and healthy. This hair care bundle is a promotional item that contains no pull-hair ties and a refillable leave-in conditioner bottle that can be filled in the salon.

Decoding Dyslexia is a magazine article by Chloe Armstrong published in the Dyslexic Advantage publication. This article analyzes the symptoms of dyslexia, neurological differences, and how dyslexia can be viewed as a strength. This article combines illustration and typography to depict the overall feeling and emotions someone with dyslexia may experience and gives information about this neurological disorder.
Dyslexia is a learning disability that affects 43.5 million people in the United States. People with dyslexia usually have trouble reading, spelling, and writing. These people have difficulties identifying speech sounds and learning how they relate to letters and words (decoding). People with dyslexia usually have individual differences in areas of the brain, which cause these individuals to be considered more creative, have problem-solving, and brilliant at spatial reasoning. Many people may see dyslexia as a disadvantage due to the US education system, but some of the brightest minds in our world have had dyslexia. Each dyslexic experience is different, which is why it is essential for people with dyslexia to share their stories so the world can have a better understanding of how dyslexia is not a disability but a gift.

By Chloe Armstrong
Dyslexia is a specific learning disability that is neurological in origin. The conditions can best be described as an interpretive difficulty in decoding oral or printed language. People with dyslexia struggle with phonemic awareness, recognizing and blending sounds in words, and typically have average or above average intelligence. Dyslexia affects more ability to decode words — as break them down into constituent sounds, or phonemes, and then to oral and novel words. That makes it hard to recognize words, retrieve words, read, write, and spell.

Some individuals with dyslexia have problems quickly identifying words. The impact that dyslexia has on each person and their ability to strive successfully is not clear. The discomfort and frustration can limit the individual's ability to function in school, work, and everyday life. People with dyslexia may have problems with reading, spelling, and writing. They may find it difficult to express themselves clearly or to be understood by others when they speak. Such language problems can also be difficult to diagnose, but they can lead to major problems in school, in the workplace, and in relating to other people. The effects of dyslexia stretch well beyond the classroom. Dyslexia can have a profound effect on a person's self-confidence and self-esteem.

The right hemisphere of the brain is known as the creative center. The left hemisphere of the brain is known as the language center. The left hemisphere is skilled at processing language and is responsible for reading, writing, and mathematical reasoning. The right hemisphere is skilled at processing non-verbal information and is responsible for spatial reasoning, visual-spatial skills, and emotional processing.

The two hemispheres of the brain work together to support the various cognitive functions. Dyslexia affects the left hemisphere, which is responsible for language processing. This can make it difficult for people with dyslexia to read and write, and may also affect their ability to process information quickly and accurately.

In conclusion, dyslexia is a complex learning disability that affects many aspects of daily life. With proper support and accommodations, individuals with dyslexia can achieve success in school, work, and other areas of life. It is important to understand and address the needs of individuals with dyslexia to help them reach their full potential.
Growing up with Dyslexia is not easy. The average person that is educated has a filter that allows them to see the world in a way that is different from the way in which we see it. This is due to the fact that dyslexia is a condition that affects how the brain processes information. The average person can read and write without any issues, but for someone with dyslexia, reading and writing can be a struggle. This is because dyslexia affects how the brain processes information, making it difficult for those with dyslexia to read and write correctly.

When I was younger, I did not realize that what I was experiencing was something that was different. I was told that I had dyslexia, but I did not understand what it meant. I did not know what to expect, and I was worried about how I would be able to keep up with my classmates. However, as I grew older, I began to understand that dyslexia is a condition that affects how the brain processes information. This means that it is important to be patient and understanding when working with someone who has dyslexia. It is important to provide them with the support they need to be successful in school and in life.

It is essential to have minds that do not work all the same to keep progressing. When I was younger, I did not realize that what I was experiencing was something that was different. Stephen King is an American Author of Horror who produced the three books Pet Sematary, It, and The Shining in the 1970s and 80s. The redesign of these infamous stories evokes the nostalgic essence of dread that Stephen King effectively portrays in these tales. The stark contrast of color and texture on the cover foretells the thrilling events within the novel.
Top Secret Games is a gaming company that created Cold Case, a murder mystery card game. The card game expanded into three editions in various locations; Murder at the Manor, Murder on Deck, and Murder at the Mall. These on-the-go card games take you through a mystery where you have to figure out who did it, what weapon was used, and where did the murder happen? Will you be able to figure out who committed the murder?
The Two-Headed Goose is a pub owned by Jack Daniel; due to his love of British food and culture, he decided to create a little Britain in his neighborhood. This pub has some of Britain’s most popular drinks and food, such as Primms, scotch eggs, and fish and chips. This pub is also famous for its poker nights hosted once a month. The Two-headed goose is a great gathering place for anyone and everyone in New York who wants to make a new friend, play a game, or just get a drink.
Lazy Noodle is a company started in Japan that creates instant ramen noodle cups. Their primary focus is sustainability, on-the-go eating, and authentic flavors. Due to the fast-paced American lifestyle, lazy noodle has decided to bring their company overseas in 2021. This brand package design is marketed to draw the eye of the average young adult, while each package was created to mimic the individual flavor of the noodles.
Broken Records is a record store located in San Francisco, La. Broken Records buys, sells, and trades new and used vinyl records. This small vinyl shop also becomes an intimate concert area every Saturday and allows up-and-coming artists to be noticed. They have built a community of music lovers of all ages to come together and share their talents and passion for music. The logo design directly references the establishment’s name with a retro-inspired color scheme that relates to the shop’s vibe.
This poster was created for Italy’s annual Trieste Science Fiction Film Festival. This poster features a deconstructed robotic head which signifies the expansion of artificial intelligence and its influence on film. This design is influenced by the cool tones and retro-futurism styling of the synthwave science fiction soundtracks of the 1980s.
The YMCA 2020 Annual Report depicts the various activities and events that occur worldwide in association with the YMCA facilities. This report details the finances, resources, and revenue during that fiscal timeline. The design is indicative of the traditional color palette and simplistic illustrations that represent community engagement.
During my internship in the marketing and communications center at Baylor University, I worked on creating multiple promotional items for the Browning Day Lecture Presentation. I created posters displayed around campus, invitations, web ads, social media posts, and an email header. I included elements from the Guardian Angel Painting, inspired by Robert Browning’s poems, into a collage format. I also used typographic hierarchy and placement to lay out the information clearly.
“Translated into Song: Robert Browning and a Picture at Fano”
Presented by Kevin A Morrison

The poster mentions an event on April 27th, starting at 3:30 PM, but the full details are not visible in the image.
